Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents users such as Meteorologists or Disaster Management Authorities who provide weather data and receive flood predictions
Rectangle with numbered header	Process	Represents system operations like Input Collection, Data Preprocessing, Model Prediction, and Result Generation that transform input data into output.
Rectangle (solid fill, no number)	Data Store	Stores data such as Weather Data, Trained ML Models (model.pkl, scaler.pkl), and Prediction Results for future use.
Labeled arrow	Data Flow	Shows movement of data such as user input → preprocessing → model → prediction result → user interface.

Example

The Data Flow Diagram (DFD) represents how data flows through the **Flood Prediction System**, starting from user input to final prediction output. The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

Flood Prediction System - Data Flow Diagram (DFD)
