

Brainstorming & Idea Prioritization Template

Date	27 Jun 2026
Team ID	
Project Name	Rising waters
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out potential machine learning models, features, or design directions without judging them initially.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Vinuthna Jignasa Malleti	Evaluate multiple tree-based ensemble models (Random Forest, XGBoost) to optimize classification accuracy.	Model Exploration	Group 1
2	Mounika Chillara	Incorporate meteorological features such as annual rainfall, seasonal patterns, and cloud visibility	Feature Selection	Group 2
3	Shaik Jasmin	Implement a lightweight Python web framework (Flask) to bridge the backend ML models with the UI	System Architecture	Group 3
4	Ramavath Mallikarjuna Naik	Deploy the final integrated solution to a scalable cloud infrastructure (IBM Cloud) via a Git pipeline.	Infrastructure	Group 4

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Train and optimize classification algorithms (Decision Tree, KNN, Random Forest, XGBoost) using historical weather data.	High	High	1	yes
2	Build an interactive Flask web application featuring a dashboard, prediction inputs, and explicit results pages	High	High	2	yes
3	Utilize IBM Cloud hosting combined with a Git deployment pipeline for seamless, widespread public access.	High	High	3	yes
