Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS	THINKS
"Traditional warning timelines do not give local populations enough hours to successfully evacuate." "We need a system that translates raw weather variables into simple, accurate risk levels instantly."	- Will the predictive model be reliable enough (over 95% accuracy) to warrant real-world tactical deployment? - We must integrate feature scaling smoothly so incoming live weather reports don't throw off the algorithm
PERSONA NAME <i>(Role / User Type)</i>	

DOES

- Collects regional data including seasonal patterns, cloud visibility matrices, and annual rainfall statistics.
- Manually cross-checks historical flood records against modern predictive classifications to validate model capabilities.

•

FEELS

- Anxious about unexpected weather spikes that could overwhelm regional infrastructure.
- Optimistic and empowered when an ensemble model like XGBoost demonstrates a proven 96.55% validation accuracy
